STRATEGIES FOR DEVELOPING INDEPENDENT STUDY SKILLS THROUGH PERSONALIZED LEARNING AMONG STUDENTS IN HIGHER AGRICULTURAL EDUCATION

Viorica BOACĂ, Codruța GAVRILĂ

Abstract: *In personalized learning, the ability to study independently is fundamental to developing a unique learning style, which is cultivated through the implementation of various techniques and methods. This paper aims to highlight the importance of cultivating and enhancing individual study skills to achieve professional and transferable competencies among students in higher agricultural education.*

•Introduction

Personalized learning is defined as a student-centered approach that tailors to the diverse requirements and developmental needs of each learner (Lee et al., 2018). To "customize learning" means to modify the educational content offered for learning and comprehension in accordance with individual needs, interests, and each student's unique pace of learning. This approach adjusts teaching methods and educational resources to align with the personal traits and interests of students (Bishop, P.

•Results and discussions

The strategies for cultivating these study skills encompass the following techniques:

- Reading Techniques
- Learning Methods:
 - Heuristic methods and techniques;
 - Communication skills and Abilities;
 - Learning through guided and independent observations;
 - Learning through research
- Information and documentation techniques;
- Techniques for organizing and processing the studied sources.

•Conclusions

- Personalized learning can significantly enhance students' motivation, engagement and awareness while also playing a key role in boosting overall satisfaction and success in education.
- A tailored strategy fosters essential skills such as reflection, autonomy,
