Abstract: In an increasingly digitized world, tourism is no exception to the need to adapt to new technologies and constantly innovate to attract and retain customers. Optimizing tourism services in Romania can bring significant benefits for both tourists and industry operators.

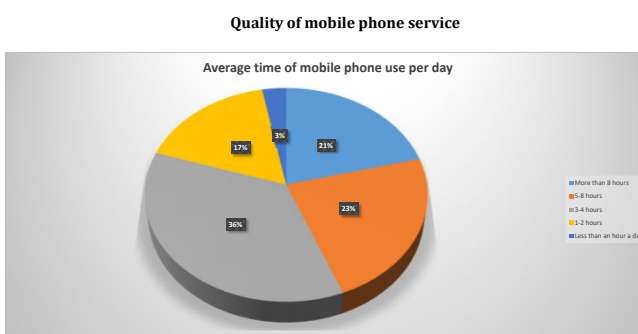

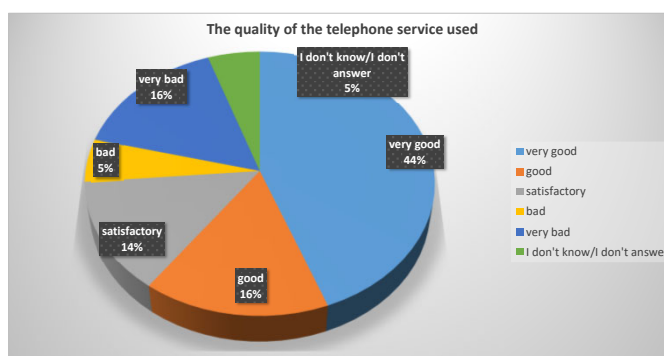

In the digital age, online presence is essential for any business, and tourism is no exception. The use of online platforms and mobile applications can significantly simplify and improve the experience of tourists.

Time of mobile phone use per day

The best service, regardless of its nature, is the one that helps you in the way you want. In terms of mobile telephony, this service includes that operator whose internet signal and speed are what you need and are necessary to achieve your intended goals. Obviously, all this offered at prices you can afford. Therefore, the operator that offers the consumer of mobile and Internet services the best services at the best value for money. Our communication needs as humans are different just as we as individuals are different from each other, so taking these aspects into account we can say that everyone knows what is best for them, therefore they will choose, from this point of view the best mobile operator. In order to be able to determine the best mobile phone network adapted to individual needs, it is recommended to consult the reports drawn up by experts and specialists as well as the reviews provided by consumers in parallel with the analysis of one's own need for use, taking into account, at the same time, some similar experiences of those around you or the opinions of users in the area of residence. In choosing the mobile phone network, the individual and objective criteria must certainly be taken into account, in the first place, only in this node can the best user experience be ensured.
